Co-organised with the [Center for Hellenic Traditions](#), CEU

Brief course description

The course will concentrate on the relationship of philosophy and scientific thought in the Greco-Roman world, from the Presocratics through the Hellenistic age up to the close of classical antiquity. We would like to investigate how mathematics, natural sciences, astronomy, and medicine influenced philosophy, and on the other hand, how philosophy and its methods and techniques framed science and scientific knowledge. Our intention is that the course should address basic questions of interrelatedness, and should show how questions asked and methods used either in science or in philosophy fertilized other areas of intellectual activity. The focus will be on questions concerning the structure of knowledge, methodology, second order theories, argumentativity, demonstrational techniques, and polemics.

Further information on the course is available at

<http://www.ceu.hu/sun>

The Summer University was established in 1996 and is aiming to involve a high-level international faculty (including CEU faculty), and excellent advanced doctoral students, junior or post-doctoral researchers, teachers and professionals as participants. While application from all over the world is encouraged, continued priority is given to applicants from Central and Eastern Europe, the former Soviet Union and countries experiencing emerging democracies worldwide. Applicants from these countries, when admitted on merit, will be eligible for scholarship, while those from developed countries will usually be expected to pay fees.
